Guidelines for Preparing Industrial Training Report
BSc in Computer Science and Engineering
Islamic University of Technology

A. Purpose of the Report

The Industrial Training Report is a formal record of the student's **work, experience, activities, technical learning, and professional development** during the industrial attachment.

The report should demonstrate what the student **observed, performed, learned, and experienced** during the training period. It should not simply describe the organization or reproduce company documents.

B. Suggested Report Structure

Students are advised to organize the report using the following structure:

1. Cover Page
Include:
- Title of the report
- Student's name and ID
- Program/Department
- University name
- Name of the organization
- Training period
- Name of the industry supervisor
- Date of submission

2. Offer Letter (if applicable)
The Offer Letter issued by the organization may be included in the report. It should preferably mention:

- Student's name, ID, university, and program.
- Training/internship position and department.
- Training period and joining date.
- Mode of conduct: online, face-to-face, or hybrid.
- Brief description of assigned responsibilities.
- Authorized signature, designation, and company seal/stamp.

3. Certificate/Confirmation (May be added later)
Include the training completion certificate or confirmation letter provided by the organization.

4. Acknowledgement
Briefly acknowledge the organization, industry supervisor and others who supported the training.

5. Executive Summary
Provide a brief overview of:
- Where the training was completed
- Duration of the training
- Major activities performed
- Technologies/tools used
- Major learning outcomes

6. Organization Profile

Briefly introduce the organization:

- Name and location
- Nature of business
- Major products/services
- Relevant departments
- IT/software-related activities

Avoid including unnecessary company history or confidential information.

7. Training Activities and Responsibilities

Describe the activities performed during the attachment.
For example:

- Software development
- Web development
- Database management
- System administration
- Networking
- Software testing
- Data analysis
- Technical support
- Documentation
- Research and development

Clearly distinguish between **activities personally performed** and activities merely **observed**.

8. Technical Work / Projects

This should be the main part of the report.
For significant tasks or projects, explain:

- Problem or objective
- Requirements
- Method/approach
- Technologies and tools used
- Your specific contribution
- Implementation/work process
- Results or outcomes
- Problems encountered and how they were addressed

Screenshots, diagrams, flowcharts, tables, or selected code snippets may be included where appropriate.

9. Knowledge and Skills Acquired

Discuss what you learned during the training, such as:

- Programming and software development
- Databases
- Networking
- Software engineering practices
- Development tools
- Testing and debugging
- Version control
- Communication and teamwork

- Professional and workplace practices

Relate the learning to knowledge gained through the CSE curriculum where appropriate.

10. Challenges and Problem Solving
Describe important challenges encountered during the training and explain how you approached or solved them. This section should emphasize **problem-solving and learning**, rather than simply listing difficulties.

11. Professional Experience
Discuss your experience of working in a professional environment, including:

- Teamwork
- Communication
- Following organizational procedures
- Time management
- Meeting deadlines
- Working under supervision
- Professional ethics and responsibilities

12. Conclusion
Summarize the overall training experience and explain how the industrial attachment contributed to your technical knowledge, practical skills, and understanding of the CSE profession.

13. References
List books, websites, documentation, papers, software documentation, or other sources actually used during the training.

14. Appendix
Include supporting materials where necessary, such as:

- Selected source code
- Additional screenshots
- Forms or templates
- Technical diagrams
- Training schedules
- Other relevant documents

Do not include confidential company information without permission.

C. General Writing Guidelines

- Write the report in **formal academic English**.
- Use clear, concise, and technically accurate language.
- Describe your **actual experience and contribution**.
- Avoid copying text from websites, company documents, or other students' reports.
- Explain technical concepts sufficiently for a CSE faculty member to understand the work.
- Use appropriate headings and subheadings.
- Number figures, tables, and sections consistently.
- All figures and tables should have appropriate captions.

- Cite external sources whenever information is taken from them.
- Maintain consistency in terminology, fonts, spacing, and formatting.
- Proofread the report carefully before submission.

D. Confidentiality

Students must respect the organization's confidentiality and information-security policies.

Do **not** include:

- Passwords or credentials
- Source code belonging to the organization unless permission is granted
- Confidential customer information
- Proprietary algorithms or business information
- Internal documents marked confidential
- Sensitive system configurations

If necessary, replace confidential information with generalized descriptions or obtain written permission before including it.

E. Recommended Length

The main report should normally be approximately **25–40 pages**, excluding the cover page, certificates, references, and appendices. The emphasis should be on **quality, technical substance, and personal learning**, not on achieving a particular page count.

F. Final Checklist

Before submission, make sure that:

- All major training activities are documented. ✔
- My personal contribution is clearly identified. ✔
- Technical work is explained with sufficient detail.
- Learning outcomes are clearly discussed.
- Important challenges and solutions are documented.
- Figures and tables are properly numbered and referenced.
- External sources are properly cited.
- No confidential company information is included without permission.
- The report has been proofread.
- The required formatting has been followed.
- The training completion certificate and other required documents are attached.

The report should demonstrate not only what the student did, but also what the student learned from doing it.
